DAY – 02

ACTIVITY – 01

DATA DICTIONARY AND BRD FOR AMAZON

Data dictionary is done by developer.

S.NO	FIELD NAME	DESCRIPTION	DATA TYPE	LENGTH	MANDATORY
1	Username/Email	Registered email used for login and sign-up	varchar	Max 50	Yes
2	Mobile Number	User's registered mobile number	Number	10 digits	Yes
3	Password	Password used for login	Varchar	Min 8 – Max 16 (String)	Yes
4	Search Keyword	The product name or keyword entered in search bar	Varchar	Max 200	NO
5	Category Name	Product categories shown on Home Page	Varchar	Max 100	Yes
6	Product Name	Name of the product displayed to users	Varchar	Max 100	Yes
7	Product ID	Unique ID assigned to each product	Varchar	Max 50	Yes
8	Product Price	Price of the product	Decimal	10,2	Yes
9	Product Rating	Average rating (1–5)	Decimal	2,1	No
10	Product Review	User-written review about the product	Varchar	Max 2000	No
11	Full Address	Complete address	Varchar	500	Yes

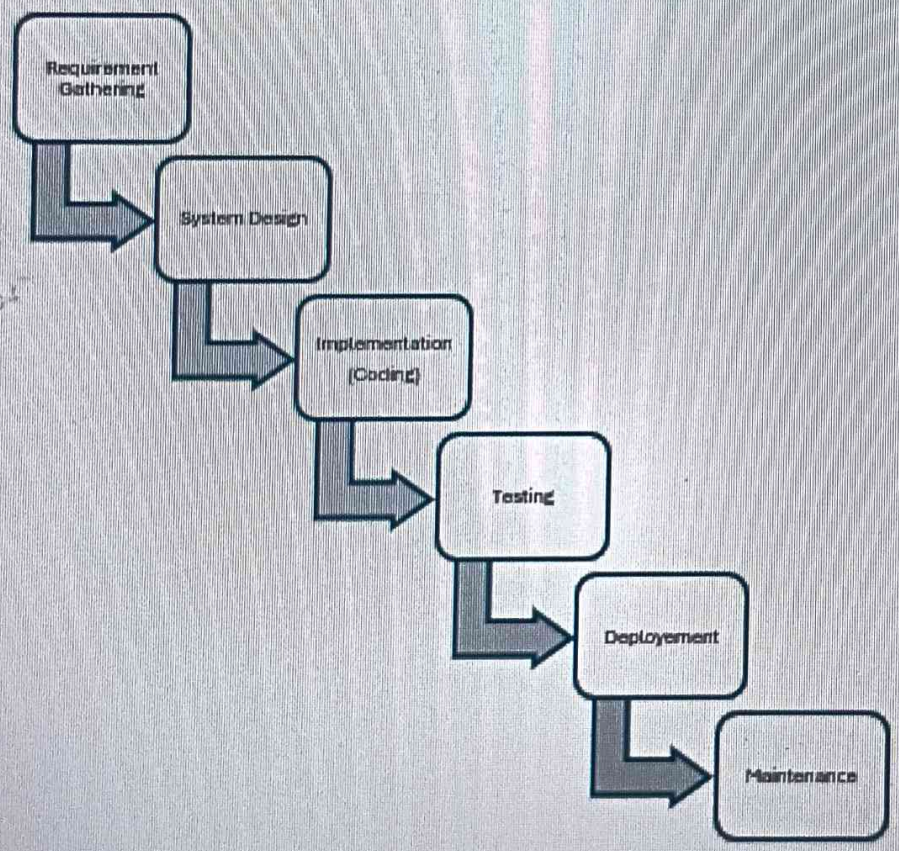
SOFTWARE DEVELOPMENT LIFECYCLE MODELS

1.WATERFALL MODEL

The Waterfall Model is a traditional software development methodology that follows a linear, phase-by-phase approach, where each phase must be completed before moving to the next. It does not allow backtracking and permits only minimal changes once a phase is completed.

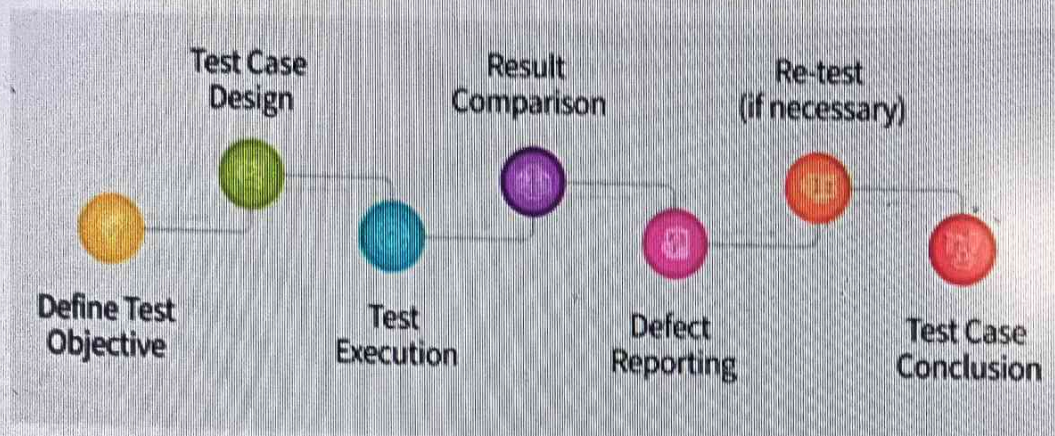
PHASES AND FLOW CHART OF WATERFALL MODEL



ACTIVITY – 03

TEST EXECUTION PROCESS

Test Execution is the process of executing the tests written by the tester to verify that the developed code, functions, or modules provide the expected result as per the client's or business's requirements. Test Execution comes under one of the phases of the Software Testing Life Cycle (STLC).



The test execution technique consists of three different phases

1. CREATION OF TEST CASES

- Test cases are written based on the requirement documents.
- Each test case contains steps, test data, and expected results.
- They help testers understand what to test and how to test it.
- Well-written test cases ensure complete test coverage.

2. TEST CASES EXECUTION

- Testers run the test cases on the actual application.
  Each test case is marked as Pass, Fail, Blocked, or Not Executed.
- Any issues found during execution are logged as defects.
- Execution continues until all planned test cases are completed.

ACTIVITY – 04

TESTING BASED ON ACCESS TO CODE

1.BLACK BOX TESTING

Black Box Testing is a testing technique where the tester does NOT know the internal code, logic, or structure of the application.
The tester focuses only on:

- Inputs
- Outputs
- UI
- Functional behaviour

Examples

- Enter correct username and password → check if login works.
- Enter wrong password → check if error message shows.
- Leave fields empty → check if validation error appears

Tools Used

- Selenium
- JMeter
- Postman
- QTP/UFT
- Appium

2.WHITE BOX TESTING

White Box Testing (also called Glass Box Testing) is where the tester knows the internal code, logic, and structure.
Focus is on:

- Code paths
- Conditions
- Loops
- Branches
- Statements

ACTIVITY – 05

UAT (USER ACCEPTANCE TESTING) AND ITS TYPES

DEFINE UAT

User Acceptance Testing (UAT) is a important phase in software testing where the software is tested in a real-world scenario by end-users to ensure it meets their requirements and functions as expected. Unlike other forms of testing, UAT focuses on validating the software's user-friendliness, functionality, and performance from the user's perspective.

TYPES OF UAT TESTING

Alpha Testing

- Done **before the product is released**.
- Performed **in-house** by internal employees or QA team.
- Identifies usability and basic functional issues.
- Conducted in a controlled environment.

Beta Testing

- Done **after the product is released to a small group of real users**.
- Performed in the **actual user environment**.
- Helps find real-world issues that internal testers may miss.
- Users give feedback before full launch.

Business Acceptance Testing (BAT)

- Ensures that **business requirements** are fully met.
- Performed by **business users, product owners, stakeholders**.
- Focus on complete business workflows.
- Confirms system supports day-to-day business operations.
